

Characteristics

- low shrinkage
- much detail
- Firm, not sagging
- non-grainy
- Pastilles, easy to dose
- Does not stick
- Brushable

Brush wax

This is the ideal wax to brush into small to very large molds with many details.

Description

This brush wax is used as the first layer in a large mold. This wax gives a high detail and is very easy to use. The higher melting point gives a solid wax even in the summer.

Technical data

Melting point	74 ° C
Ideal processing temperature	71-82 ° C
Color	Purple
Ash content after incineration	<0.03%

Processing

The wax is melted at a temperature of 75 °C and brushed into an open mold. The wax skin made in this way is then strengthened by pouring a sturdy, cheap wax at a slightly lower temperature behind it.

Special instructions

Avoid at all times that the wax is heated to above 100 ° C. If this is done, this can have a lasting effect on the properties of the wax.

Packing

The casting wax comes in the form of small pellets the size of a pea and is packaged in bags of 1 kg and 25 kg.

Durability

At least 5 years.

Safety

Prevent skin contact with the molten (liquid) form of this wax and avoid inhalation of gases / vapors.
