

SILICONES

and more

Silicone Glue Set

Please Note: The components can cause irritation of the skin. You should always use safety gloves and goggles and make sure the room is well ventilated.

Description

If you want to glue cured silicones (condensation and addition) to a surface you can use this set. It even works to glue together cured silicone. The set consists of a highly liquid primer and adhesive.

processing

The primer you should put on the silicone paste. NOT on the surface to paste (unless the substrate also consists of silicone).

The primer leave for 1 minute on the grease and dust-free silicone and then apply the glue and attach the silicone on the surface. Apply the adhesive within 30 minutes after the primer!

Depending on the substrate and temperature bonding a few seconds to 15 minutes a fact.

The full bonding strength is reached after 15 minutes to 2 hours.

Tested substrates are:

- Silicones, both condensation silicones as silicone addition.
- Aluminum
- Iron and steel
- PP (polypropylene)
- rough wood
- painted wood
- glass

special_instructions

PAY ATTENTION. Always use gloves and goggles when using the primer and work in a well ventilated area. Wash your hands thoroughly after use, since the fluids are toxic and irritating to the skin.

The materials are also inflammable!

Please read the safety data sheets before use.
