Wax venting ducts / runners

This wax is suitable for the "lost wax".

Description

The round runners are made of a specially designed soft but solid wax, which can be bent into shape optimally. You can bend the runners (at room temperature) without worrying about them breaking. The channels are available in different diameters and can be used as runners.

Technical specifications

rod length	60 CM
Ideal processing temperature	Room temperature (15-25 ° C)
color	red

processing

With a spatula or a knife you can shorten the channels up to the desired length. Then turn the channel into the desired shape (best at room temperature). Attach the channel at the model by melting the end carefully and then letting it solidify against the model. Often, you can also glue the channel with sticky wax or glue.

Special instructions

When processing below 15 ° C, it may happen that the wax breaks during bending. Therefore please make sure to work at room temperature (20 °C) The channels / runners are suitable for the lost wax process.

packaging

The runners come in the selected diameter with a length of 60cm. Depending on the order amount, the channels are delivered per piece or bundled. It may be that the channels are bent prior to transport to make the delivery more efficient.

Durability

At least 3 years.

Safety requirements

Avoid skin contact with the molten (liquid) form of the wax and avoid inhaling the vapors / smoke.

Characteristics

- Good bendable
- Firm, not sagging
- Rods 60 CM
- Red in color
- round solid
