

KNEADABLE SILICONE

An easy visible guide on using kneadable silicone

Anyone can do it!

Step 1

PREPARE THE MODEL

Prepare the modell. Make it free of contaminating materials and decide where the seam and the opening should be.

WEIGH

Measure the right amounts of A and B component and knead both components thoroughly together

Step 2

MOLD 1

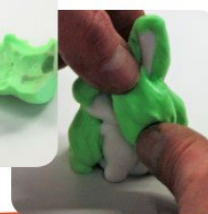

Mold the silicone around the model on one side and let it harden.

Step 3

MOLD 2

Put some vaseline on the hardened side. Mold the silicone around the model on the other side.

Step 4

Step 5

POURING

Put the two sides together, use rubber bands to hold them together and place the mold with the opening upwards

Step 6

RESULT

Remove the rubber bands and gently remove the silicone form. Enjoy your casting!
